

eConstruction solution

You face a broad range of challenges: coordinating complex remotely projects, managing vendors and subcontractors, adapting to new technologies, respecting deadline and budget. The Perceval eConstruction Platform for Construction and Operations delivers integrated Telecommunications tools for real-time information about engineering, schedules, and costs. So you can manage projects and processes at any decentralized locations around the world.

With the eConstruction services, you can concentrate your focus to all the business processes within your project and plant life cycles. And you can collaborate securely and optimally with suppliers, subcontractors, operators, and customers. So you can improve performance, become more competitive and achieve your business goals.

The Perceval eConstruction Base package will provide you:

Access services

the fundamental building block in using Internet technologies to enhance your business. With the Access Services SDSL your organisation is enable to integrate your systems and operations with those of your customers, suppliers and construction sub contractors or partners

Shared server hosting and Dedicated hosting services

makes customers data permanently available to Internet users from a shared computer. Hosting benefits your organisation by providing reliable storage and maintenance of online information and means you can focus on delivering projects on time and on budget, without infrastructure investment.

VPN

provides the capability to encrypt data communications across the entire ecosystem, enabling organizations to connect securely across the Internet for the management of the specific processes related flows of operational and strategic construction project information. If the information is not related to process, Firewall will enforces access control policies on a network connection, typically preventing unauthorized intrusion from the Internet.

In order to optimize your Business execution , Perceval proposes satellite access, VoIP, Backup, AntiSpam, eMail, SLA... as additional services options.
