

eHealthcare solution

Healthcare is a high-pressure industry facing demands for higher-quality patient care, cost controls, government regulations, and increasing competition.

The Perceval eHealthcare platform enable you to manage your healthcare processes from staffing and inventory to financials and patient-centric processes on a proven technology platform designed for all medical, administrative and clinical entities, so you can focus your tasks to :

- Manage and coordinate patient care, from pre-registration and bed assignments to patient education.
- Access Web-enabled functions for patient management, diagnostics, and therapy.
- Assess case loads, develop and implement treatment strategies, and document clinical care
- Communicate online with patients, payers, providers, general practitioners, suppliers, and other healthcare providers.
- Focus customer relationship management on patients, external physicians, employees, donors, and other key customers.

The Perceval eHealthcare Base package will provide you:

Access services

the fundamental building block in using Internet technologies to enhance your business. With the Access Services ADSL your organisation is enable to collect information from the entire ecosystem and to integrate your operations with those of your patients, payers, providers, general practitioners, suppliers, and other healthcare providers. A SDSL service can be proposed for headquarters of medium healthcare organizations with decentralized entities.

Domain name service

enables the registration, operation and maintenance of the correct host name to network address mappings in the Internet Domain Name System (DNS). This will ensure the full commercial visibility of your services.

Shared server hosting and Dedicated hosting services

makes customers data permanently available to Internet users from a shared computer. Hosting benefits your organisation by providing reliable storage and maintenance of online information and means you can focus on delivering best of classes services by maximizing the customer satisfaction, without infrastructure investment.

Firewall

enforces access control policies on a network connection, typically preventing unauthorized intrusion from the Internet or VPN provides the capability to encrypt data communications across the entire ecosystem, enabling organizations to connect securely across the Internet for the management of the healthcare processes related flows of confidential and dedicated information.

In order to optimize your Business execution , Perceval proposes VoIP, Backup,AntiSpam, eMail, SLA... as additional services options.
