

eTransportation solution

Logistics service providers are feeling the pressure to meet escalating customer demands, differentiate themselves with new and more targeted services, and compete in an increasingly complex global marketplace. In this demanding context, you need a telecommunication solution that will help you reduce operating costs, integrate processes across the enterprise, and increase visibility into customers, carriers, financials, and overall operations.

The Perceval eTransportation platform will provide for transportation Service Providers comprehensive capabilities for an integrated, flexible set of solutions that enable you to handle complex business processes in procurement, warehousing, fulfilment, returns management, and value-added logistics.

With the Perceval eTransportation platform, you have the capabilities to automate processes in a very end to end scalable infrastructure by streamlining core processes such as warehousing and transportation. The Perceval Telecommunication eBusiness platform gives you the opportunity to focus on monitoring carrier performance, gain greater visibility into supply chains, and providing accurate and up-to-the-minute information about shipments and supply chain performance.

In order to optimize your Business execution, Perceval proposes VoIP, Backup, AntiSpam, eMail, SLA... as additional services options.

The Perceval eTransportation Base package will provide you:

Access services

the fundamental building block in using Internet technologies to enhance your business. With the Access Services SDSL your organisation is able to integrate your systems and operations with those of your customers and partners, and serve customers in the transportation industry while meeting its specific requirements.

Domain name services

enables the registration, operation and maintenance of the correct host name to network address mappings in the Internet Domain Name System (DNS).

Dedicated Hosting Services

enables exclusively your business to deploy and maintain Web sites, e-commerce portals or online data with ease and maximum reliability. With hosting services, Perceval maintains the computer that runs your hosted service. Hosting benefits your organisation by providing reliable storage and maintenance of online information. This means you can rapidly implement new logistic processes and services, adapt processes to meet increasingly strict customer needs, without infrastructure investment.

VPN

provides the capability to encrypt data communications across the entire ecosystem, enabling organizations to connect securely across the Internet for the management of the logistic and processes related flows of information.

Firewall

enforces access control policies on a network connection, typically preventing unauthorized intrusion from the Internet. This service is required for organizations facing continuous changes of the logistics players along the supply chain.
